

# Do you take strong pain medications?

## For example:

Percocet, Hydrocodone, Methadone, Oxycodone, Morphine, MSContin, Hydromorphone, Fentanyl, or any other “opiate” medication

## Ask your provider for Naloxone!

Naloxone is an antidote sprayed into the nose or injected into your body if you are too sleepy or can't be woken up due to these pain medications. Talk to your provider for more information.

Poster funded by the California Health Care Foundation and the California Department of Public Health.
