14 - Community Center

FRIENDS OF WARNER VALLEY - April 25, 2023

Context

Warner Valley is a startlingly beautiful valley perched at 5,200 feet in the Cascade Mountains near the foot of Mount Lassen, California. The landscape is composed of mixed montane forest, rock outcrops, streams, springs, meadows, and marshes.

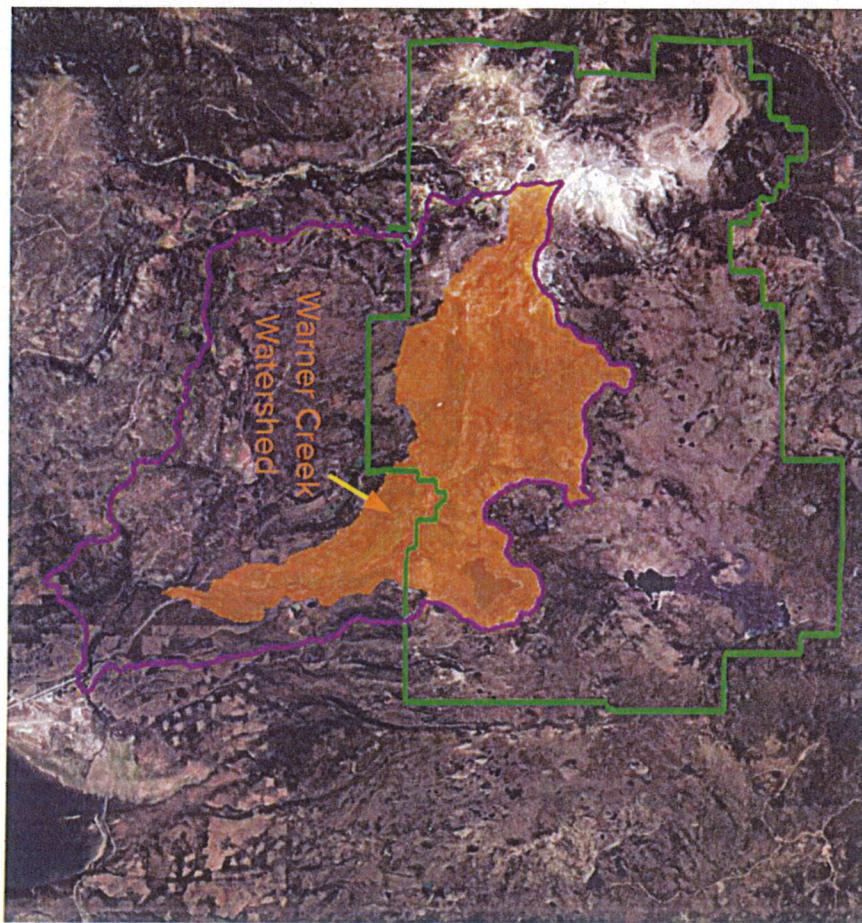

Warner Valley has one of the largest wet meadow and riparian complexes in the northern Sierra/southern Cascades region. It supports a significant diversity of bird species including the willow flycatcher and sandhill cranes. It also is habitat for California's largest migratory deer herd, and home for rare animals such as gray wolves, Sierra Nevada red fox, and Cascades frogs.

The Dixie Fire of 2021, which burned much of the Valley with extreme intensity, destroyed close to 100 cabins and left a large portion of the forest dead or charred.

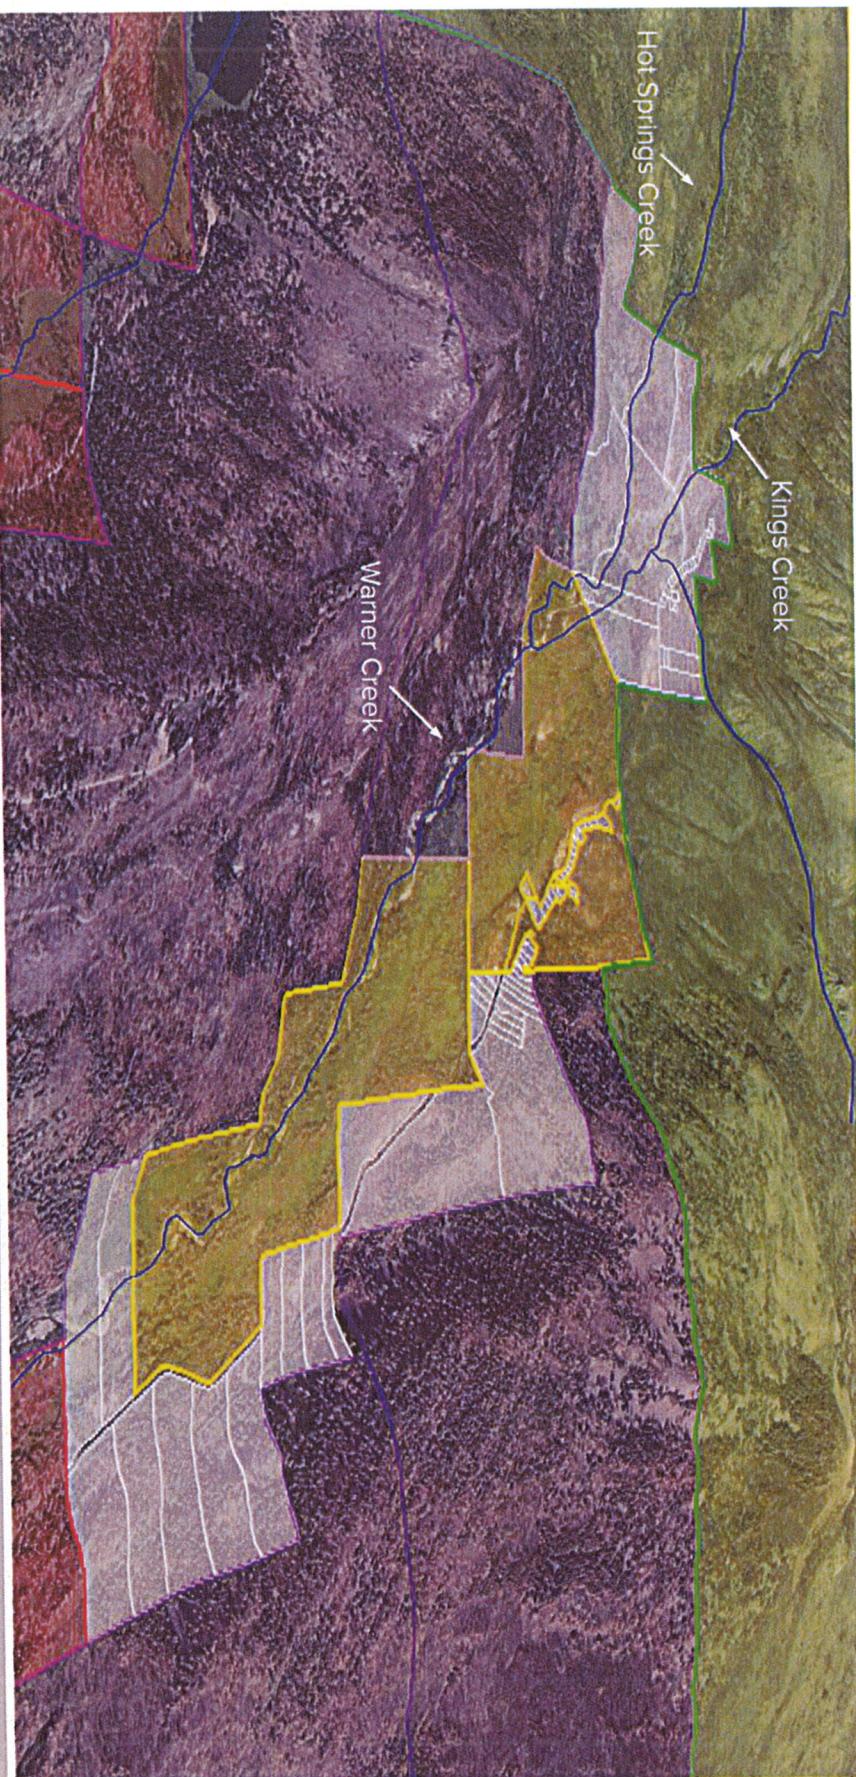

The Friends of Warner Valley is a group of community members who, with the help of The Sierra Institute, are seeking grant funding for an integrated watershed plan that will provide long term, science based guidance for the multiple government agencies and private landowners responsible for the stewardship and ownership of Warner Valley.

Cabin Rebuilding and Site Clean Up Needs

- Challenges:
 - Off grid, no utility services
 - Small lots typically 1/4-1/3 acre, low density, 200 cabins over 12 miles
 - Seasonal access only 4-6 months for clean up and building
 - Water source is frequently springfed surface water
 - Building & Planning requirements: solar, sprinklers, setbacks
 - Septic systems: many burned or built prior to building permit process
 - Most were either under or uninsured
